## AVM-4 Action Replay Controller

**CONTROLS FOUR MACHINES**

**ADVANCED NETWORK CONTROL**

**160 PROGRAMMABLE KEYS**

**CHOICE OF 4 T-BAR RANGES**

**10,000 MEMORY LOCATIONS**

**4 GPI INPUTS 4 GPI OUTPUTS**

**PLAY LIST MANAGEMENT**

**LINEAR AND NON LINEAR EDITING**

**CONTROLS DIGITAL BETA,**

**BVW75, BETACAM SX, MAV-555**

**TEKTRONIX PROFILE, ASC VR300**

**COMPACT 225W X 232D X 134H (mm)**

The AVM-4 Action Replay Controller is a new development from Ash Vale Marketing. This state of the art controller allows operators to utilise the enhanced features of the new generation of disk recorders. The AVM-4 controls most machines with Sony RS422 protocol. Each controller can be operated independently, or form part of a 485 network system. Under network control, cues, files and text can be received. In network mode, operation of the AVM-4 and its functions can be remotely controlled. A total of 32 controllers can run on one network, allowing independent control of up to 128 different devices. Source switching of the input to network VTRs can be controlled directly from the controller.

The layout of the AVM-4 is logical and uncluttered with the essential operational controls conveniently placed. As well as the T-bar, there is a Jog knob and a full function illuminated keypad. There are also 8 programmable function keys selectable at 20 different levels.

The AVM-4 has 10,000 memory locations shared between cue storage and playlist data and all are battery-backed. Cue times may be viewed directly or scrolled with the jog knob. A browse facility is available for disk users. The AVM-4 allows the control of 4 machines simultaneously or discretely. The large 16 digit alphanumeric display highlights machine commands, timecode and network text. External full status monitoring information is also available on a BNC rear connector.

The variable speed ranges on the T-bar are from 0 to 100% in VAR. In super speed mode the T-bar can be varied to suit your particular needs, with 4 additional speed ranges available. Standard two machine editing and the creation and execution of Profile, MAV-555 and SX hybrid playlists can also be performed directly from the AVM-4 controller.
